8	9,09	100	36
9	10,23	105	38
10	11,37	112	40

## Why choose chromium-vanadium steel?

**Chromium-vanadium** is a special grade of steel alloy. It is used for the manufacture of steel tools, springs and in high-tension applications.

This grade of steel has increased hardness and **superior resistance to corrosion and wear and tear.**

This is why Mikalor DIN 911 Allen keys guarantee prolonged use without the edges and corners of the key becoming worn down prematurely.

**HARDNESS:** S 1,5 to 6 min.: 52 HRC  
S 8 min.: 50 HRC  
S 10 min.: 48 HRC
